Missing values in features

Missing values in features

Missing values in sequential data (DAY_ID)

```
# For 208 days we have only information  
of FR,no DE
```

```
# The occurrences of 'DE' and 'FR' in the  
'COUNTRY' column.
```

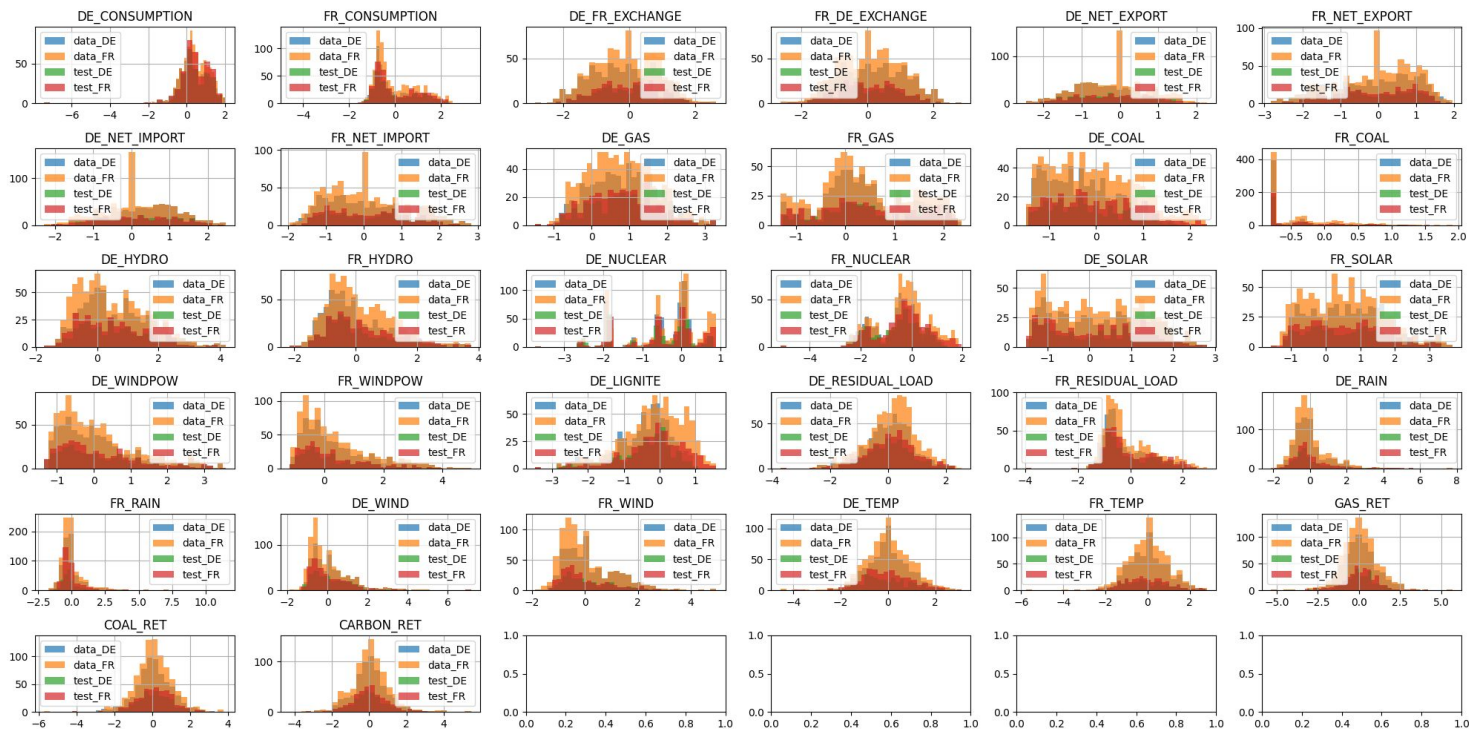

```
(643, 851)
```

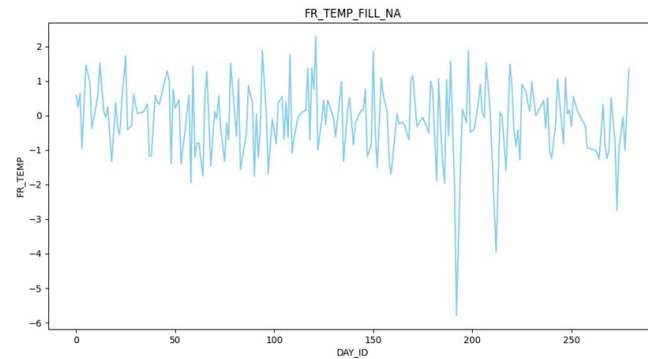

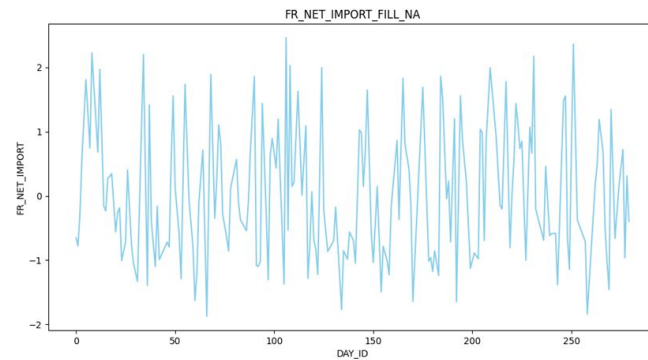

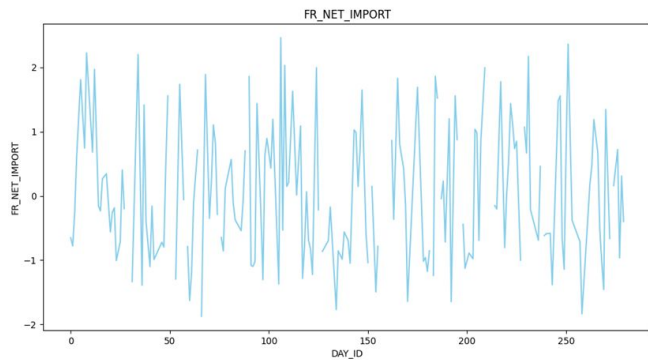

High correlations in features

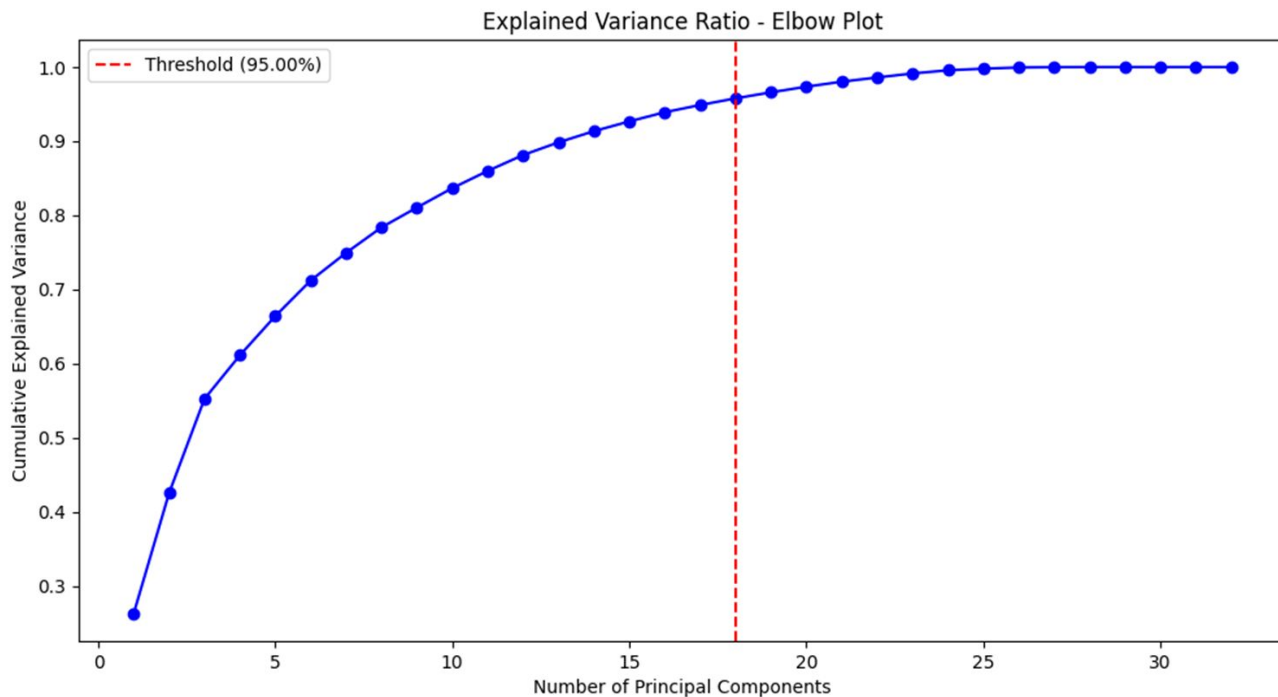

Feature Distribution (Normalization?)

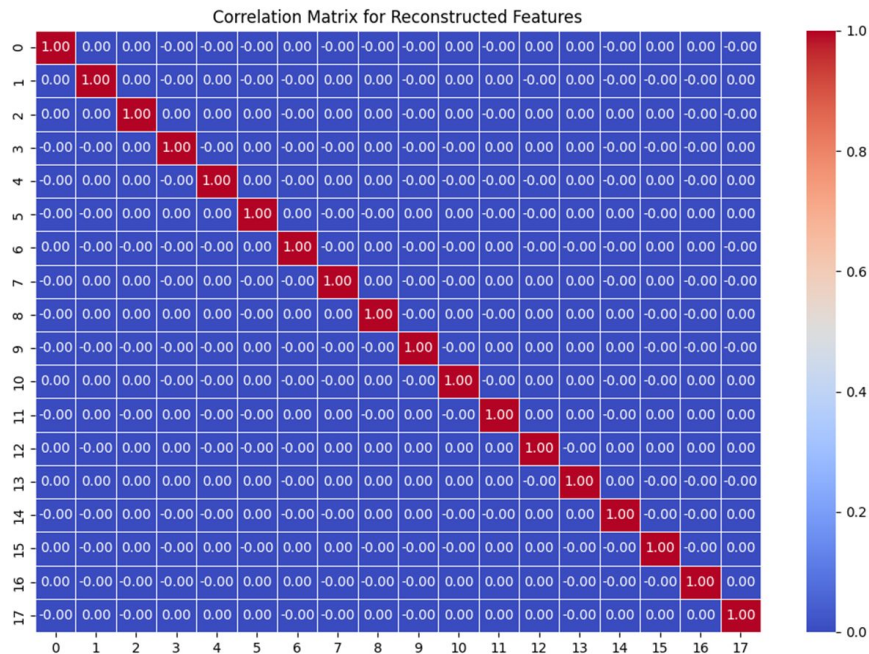

Solution – Missing values

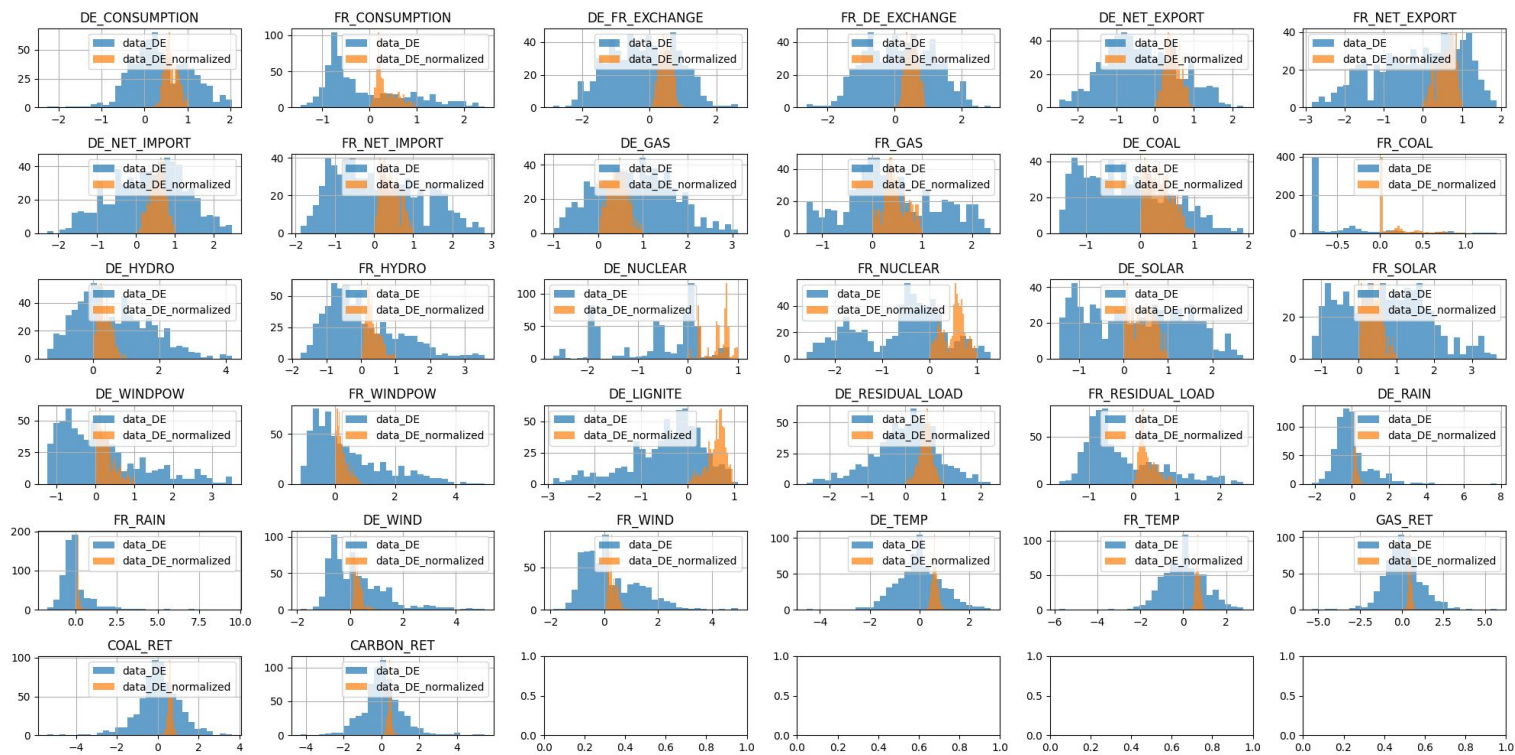

Solution – Multicollinearity

Solution – Multicollinearity

Solution – Normalization

Summary

Observations

- There are missing values in some features
- There are missing values in days
- There are features that might be highly correlated
- We can't tell if the data is already normalized or not

Solutions

- Replace missing values with appropriate approaches
- Check correlations between features
- Implement PCA on dataset to eliminate the effect of multicollinearity
- Conduct normalization on features
